

IBAI® Communicates with any Tablet and Phone

- the latest in technology!!!

We are introducing an excellent and very modern solution, which allows the blind people to use and work with popular modern tools, like advanced tablets or intelligent telephones.

Our proposition consists in connection of the tablet (or mobile phone) and the Braille Note-Taker IBAI SD® to work together. This is the best solution for Home and Students.

The IBAI® is compatible with all available screen readers like Window-Eyes, Jaws, VoiceOver, TalkBack or SuperNova.

The weight of the tablets is less than 1.0 kg and its size is smaller than an A4 page. IBAI® is working with them as an external keyboard and speech.

This allows solving all the known problems of the touch screen keyboards, and makes using these light mobile devices easy and fast.

Thanks to the external speech and keyboard, you can control the tablet, PC or mobile phone even when it is in a distance from you. You can keep it in the bag or on the shelf at any place of your flat and use it from the distance sitting on the chair or when listening to your favorite book. At the school, you can provide your work not even taking the tablet out of your satchel or if the teacher assistance is needed, you can place it on the teacher desk. Then the teacher will see the tablet screen having full control of your work.

Thanks to the tablet's software and access to it, you can explore the Internet, write and read e-mails, create spreadsheets and many more. In a part of a second, you can go back to the IBAI® functionality and listen to books, make records, notes, calculate equations and many more.

The set composed by a tablet and the IBAI® will work without charging the whole day. You do not have to be worry about the power even if you want to use it continuously for 10 hours.

The benefits of the IBAI®:

- Very fast start 0.2 sec (when in the sleep mode the IBAI® can stay 5-6 days without charging)
- Extremely fast start for reading recent books (Audio, Daisy, TXT, epub, docx).
- Advanced book player with the very flexible feature of categorized bookmark lists.
- Very fast access to the voice recorder.
- Easy way to select the folder where the recording is going to be stored.
- Quick information about how long recording can be stored.
- Easy way to go to the recordings list.
- Advanced recorder settings including the sensitivity of the microphone (Fixed or Auto - when it is changing according to the signal level) and the sampling frequency.
- Color recognizer, color comparator and light meter.
- Advanced programmable scientific calculator.
- Terminal mode (Bluetooth) where IBAI® uses speech and sound from external device. This allows you to work from a distance with your tablet/computer/phone. The device can stay in your bag or if needed, it can stay on the desk (for teacher control). The sounds come from the IBAI®.
- Possibility of simultaneous control from 2 to up of 5 external devices.
- Very fast switching from Terminal mode to the IBAI® mode and back (for example you can quickly check the e-mails while you are reading a book or writing a document on the IBAI®).
- Very simple keyboard, only 8 keys.
- Two voices, bilingual
- Powerful file manager with a possibility to create a list of files for copying, moving or deleting.
- Intuitive text editor with possibility to edit two documents simultaneously.
- Music editor (when you enter a Braille note the IBAI® will play it or speak its name). You will be able to play the music from notes typed in according to the simplified International Braille Music Notation.
- Compatible with the following screen readers: Jaws, Window-Eyes, SuperNova, VoiceOver, Talkback, etc.
